

[illegible]

The figure presents a comprehensive architectural study for the San Michele - Via Lamarmora project. It includes a 3D perspective view of the building's facade, a planimetric map showing the building's location within the urban context, and three detailed cross-sections (A-A, B-B, and C-C) illustrating the internal structure and spatial organization. The planimetric map highlights the building's footprint and its relationship to the surrounding streets and existing structures. The cross-sections provide a clear view of the building's internal layout, including the distribution of rooms, the placement of structural elements, and the integration of the building with the ground level. The 3D perspective view offers a visual representation of the building's exterior design, showing the facade's materials, colors, and the overall form. The drawings are presented in a clear and professional manner, using a combination of black and white lines and color to distinguish different elements and provide a comprehensive understanding of the project.
